

Cherry Crest Pump Station Project

Project Overview

Bellevue Utilities is planning to replace the aging pump station facility located in Cherry Crest Mini Park along 127th Avenue NE just north of NE 24th St.

Once the project is complete, the Cherry Crest pump station will improve water service reliability and fire protection to both the Cherry Crest and Pikes Peak neighborhoods. The Cherry Crest reservoir will not undergo any updates improvements at this time.

For the new pump station to operate properly, work in the area will also include the replacement of two water mains on about an 1,800-foot segment of 127th Ave NE and adjoining streets to the north, and the addition of a pressure reducing valve station (a buried concrete vault) in the Cherry Crest neighborhood.

Background

The City of Bellevue owns, operates, and maintains the Cherry Crest Pump Station and water storage reservoir facilities at the Cherry Crest Mini Park. The Cherry Crest pump station was scheduled for an upgrade in a few years, but the need to replace it now was identified as part of the alternatives evaluation and public outreach process recently completed for the Pikes Peak Reservoir Replacement Project, located in Bridle Trails State Park. The Pikes Peak pump station will be combined with the Cherry Crest pump station under this project. Later, the Pikes Peak pump station will be removed from service as part of the Pikes Peak Reservoir Replacement Project.
